Teller Module

Manual Testing

- Manual testers perform teller operations like deposits, withdrawals, and currency exchanges.
- Error-prone, time-consuming, and difficult to simulate multiple concurrent teller transactions.

Automated Teller Module

With the help of Selenium Python and a customized framework

- Automated tests simulate teller transactions, such as deposits, withdrawals, and currency exchanges.
- Selenium Python scripts follow TDD methodology, integrated into the framework.
- Enhances transaction accuracy, ensures consistent testing, and facilitates concurrent transaction simulation.
