Customer Module:

Manual Testing:

- Manual testers interact with the UI to input customer information, validate data, and check system responses.
- Inconsistent testing due to human variation, and potential for missing edge cases.

Automated Customer Module:

With the help of selenium python and customize framework

- Automated tests validate customer profile creation, data validation, and interaction scenarios.
- Selenium Python scripts written using TDD principles, integrated into the framework for systematic testing.
- Provides repeatable and consistent testing, improved edge case coverage, and faster feedback.
