1. Account Module:

Manual Testing:

- Testers manually navigate the application, create new accounts, update account details, and perform transactions.
- Prone to human errors and time-consuming for repetitive tasks.
- Limited coverage due to time constraints and inability to test all scenarios comprehensively.

Automated Account Module:

With the help of selenium python and customize framework

- Automated tests simulate user interactions, such as account creation, transaction processing, and balance verification.
- Test scripts are written using Selenium Python, following the TDD methodology, and integrated into the customized framework.
- Benefits include faster test execution, consistent coverage of scenarios, and reduced manual effort.
